## Mass Spectrometry

NOTE: Mass spectrometers do not communicate with Harvest LIS directly, but all communicate through middleware using a file drop. The analyzer receives orders through the Load List by Order Choice that is uploaded into the middleware and sends results back as a comma separated value (CSV) file. The three pieces of middleware that are most commonly used are AB SCIEX Analyst, Agilent MassHunter, and Waters MassLynx. Analyst and MassHunter will both use the MassHunter interface. The Waters MassLynx interface functions much differently (including an HL7 option) and so has its own interface.
