

Orchard Software's Veterinary Laboratory Information System

The flexibility of Orchard's products create a valuable tool for many different types of laboratories, including independent veterinary laboratories and university veterinary schools.

Animal Data for the Veterinary Laboratory

Orchard's laboratory information system contains veterinary-specific functionality including:

- Capture data for species, breed, animal-specific reference intervals, and taxonomy
- Capture and access owner information
- Send automatic email appointment reminders to improve animal care
- Display animal information pop-up window (e.g., spayed/neutered, pen/cage, microchip number, etc.)
- Allow convenient access to test results, alerts, and linked images such as animal lineage documentation

”

Over the years, I have had an abundance of interaction with many Orchard personnel and everyone has been extremely helpful and professional. I am also impressed with how proactive Orchard is—staying ahead of industry changes and communicating with users via thought leadership forums (e.g., white papers, symposiums, webinars, etc.). My team and I have gotten a lot of useful continuing education from Orchard's resources.

Advanced Data Analytics

Orchard's analytic capabilities enable users to extract and manipulate data stored in the LIS and generate statistics such as population mean, add-on tests, or necropsy totals by species. The robust data mining tools quickly and easily provide vibrant reports without third-party tools. Perform searches and build reports by sex, species, breed, specimen, diagnosis, test result, case number, and more.

Integration Expertise & Shared Database

Orchard's integration expertise and shared database for clinical, microbiology, cytology, and anatomic pathology electronically integrate all your departments, allow access to an animal's entire lab history, and enables the report consolidation.

In addition, Orchard's products provide:

- advanced rules-based decision-support
- flexible reporting options
- convenient image management tools

As industry trends in the veterinary world change quickly, it is imperative to have a proactive software partner that can consistently capture clinical data in an integrated format and respond to customer needs in a timely manner.

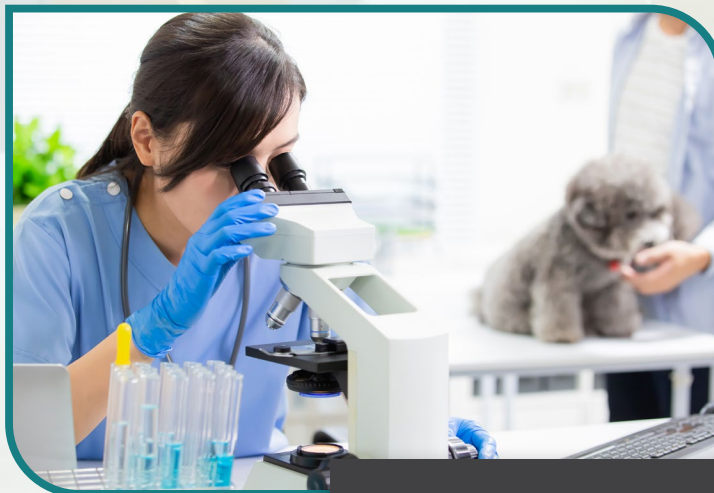

“

Purdue Veterinary Teaching Hospital's Clinical Pathology laboratory has utilized Orchard Software's products since 2010. We have found that Orchard's Laboratory software systems are extremely user friendly and offer a ton of diversity that is much-needed for the veterinary setting.
